

Low/No VOC Paints and Finishes = **Certified Low/No VOC Finishes**

Technical Description:

Interior paints and finishes may contain volatile organic compounds (VOCs). VOCs include a variety of chemicals, some of which may have short- and long-term adverse health effects, including eye, nose, and throat irritation; headaches; loss of coordination and nausea; allergic skin reactions; and damage to the liver, kidneys, and central nervous system. To protect indoor air quality for both occupants and contractor staff, builders will use low- or no-VOC-containing products and air the house out well during construction and in the first few weeks after paints and sealants have been applied, when any concentrations of VOCs would be the highest.

Certified Low/No VOC Finishes Sales Message

Certified low/no VOC finishes help control one of the most significant health risks where we live. What this means to you is your family can breathe better every day knowing your home was built to help manage a critical respiratory contaminant. Wouldn't you agree protecting health is too important to ignore in new homes?
